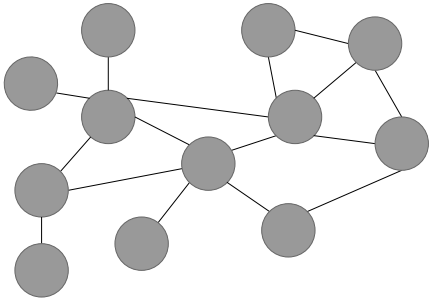
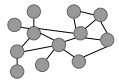
Introduction

Social Network Analysis

The study of relationship between actors.



Social Network Analysis
The study of relationship between actors.



Persistent roles should occur in any social network
Based on the structure of the network

Persistent roles should occur in any social network
Based on the structure of the network

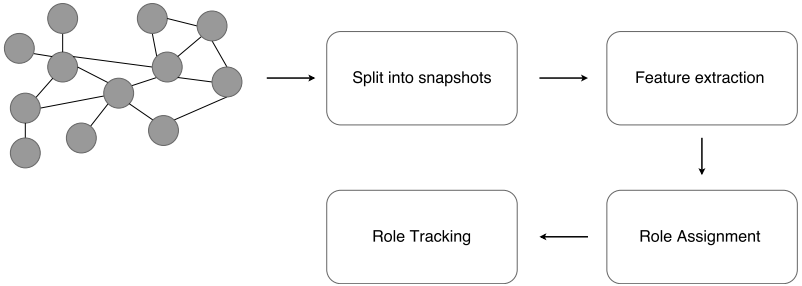
Applications

graph mining
Targeted advertisement

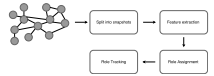
Applications
graph mining
Targeted advertisement

Methodology

The Approach



The Approach



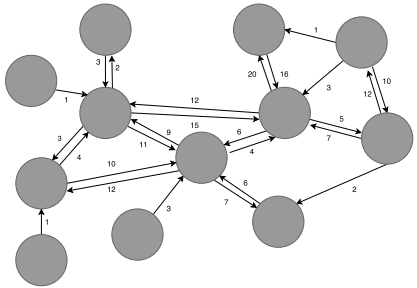
Feature-based approach

The Data

Datasets:

- Facebook - Wall posts from one user to another
- Scratch - Comments on uploaded programming projects

Directed, timestamps.



The Data

Datasets:
- Facebook - Wall posts from one user to another
- Scratch - Comments on uploaded programming projects

Directed, timestamps.

Snapshot Split-up

The dataset is split into a total of 26 snapshots:

- 7 from facebook
- 19 from Scratch

Non-overlapping
Same length = observation window Ω.
Something with node interaction being smaller than Omega. (90th percentile?)

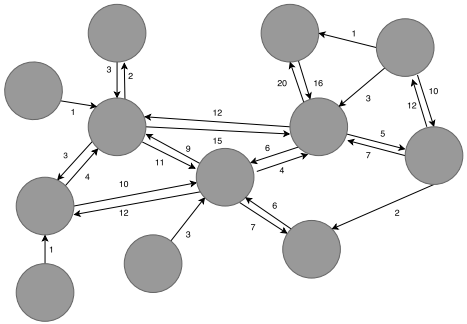
Snapshot Split-up

The dataset is split into a total of 26 snapshots:
- 7 from facebook
- 19 from Scratch

Non-overlapping
Same length = observation window Ω.
Something with node interaction being smaller than Omega. (90th percentile?)

Feature Selection

12 features based upon the graph.



In-degree
Out-degree
Weighted in-degree
Weighted out-degree
Reciprocity
New activity
Social strategy
Betweenness centrality
PageRank
Weighted PageRank
Transitivity
Weighted transitivity

Feature Selection

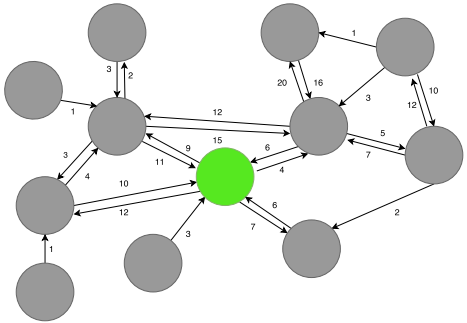
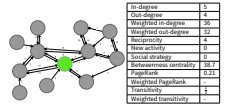
In-degree
Out-degree
Weighted in-degree
Weighted out-degree
Reciprocity
New activity
Social strategy
Betweenness centrality
PageRank
Weighted PageRank
Transitivity
Weighted transitivity

Feature Example



In-degree	5
Out-degree	4
Weighted in-degree	36
Weighted out-degree	32
Reciprocity	4
New activity	0
Social strategy	0
Betweenness centrality	38.7
PageRank	0.21
Weighted PageRank	-
Transitivity	$\frac{1}{3}$
Weighted transitivity	-

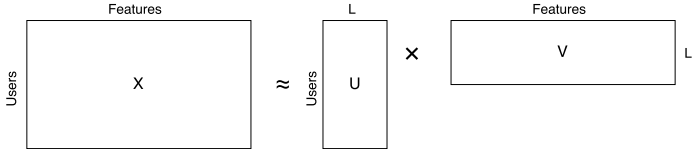
Feature Example


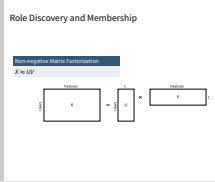
In-degree 5
Out-degree 4
Weighted in-degree 36
Weighted out-degree 32
Reciprocity 4
New activity 0
Social strategy 0
Betweenness centrality 38.7
PageRank 0.21
Weighted PageRank -
Transitivity $\frac{1}{3}$
Weighted transitivity -

Role Discovery and Membership

Non-negative Matrix Factorization

$X \approx UV$





- Frobenius NMF updated with euclidean distance
- U and V are initialized with left and right matrix from nndsvd (Modified svd)

Selection of L

Root Mean Squired Error

$$RMSE = \sqrt{\frac{1}{|X|} \sum_{(u,f) \in X} (X_{u,f} - X'_{u,f}}$$

Selection of L
Root Mean Squired Error
$RMSE = \sqrt{\frac{1}{|X|} \sum_{(u,f) \in X} (X_{u,f} - X'_{u,f}}$

Tracing Roles

The sim between snapshots.

Tracing Roles
The sim between snapshots.

Persistent Roles

Role Transition

Role Transition

Conclusion

Conclusion

Shortcomings

They does not argue for their selection of features or give a reference to an article that does.
Number of snapshots.

Shortcomings

They does not argue for their selection of features or give a reference to an article that does.
Number of snapshots.
